TECHNICAL WORKSHOP MEDICAL SURVEILLANCE PROGRAM GUIDELINES IN THE WORKPLACE 2023

In line with the required duties of occupational health doctors as stipulated in the USECHH 2000 regulations in conducting an effective medical surveillance (MS) program, this training provides participants with the relevant knowledge and skills to utilize this 2023 Medical Surveillance Guidelines encompassing all the important components of MS such as the basic concept of medical surveillance program, basic toxicology, extracting relevant information from CHRA & CEM reports, correct utilization of biological monitoring and biological effect monitoring data, awareness on confounding factors in result interpretation, measures to reduce sampling error, producing report and record keeping. The information provided in the training would also benefit other related parties such as the employer and other occupational health practitioners in regard to ensuring compliance and cooperation with OHD in any MS program.
